WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

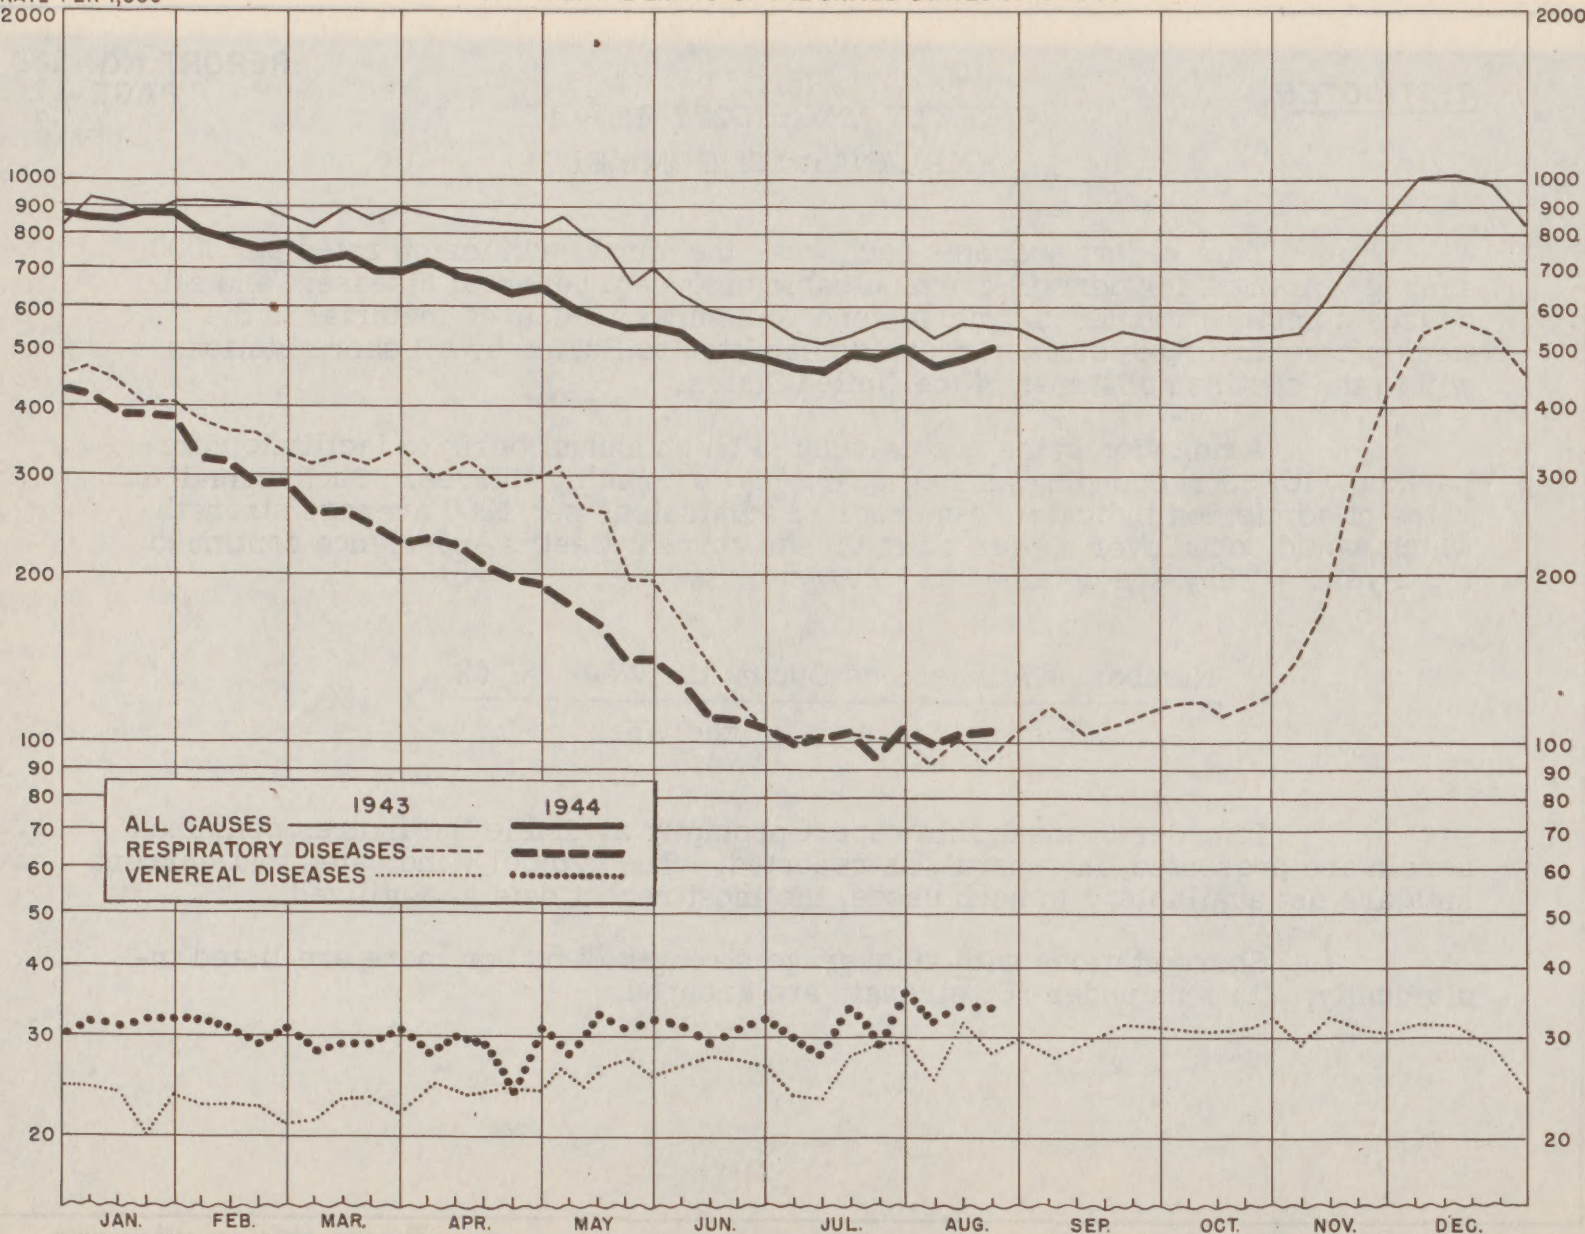

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS
FOR CERTAIN RESPIRATORY DISEASES*, VENEREAL DISEASES, & ALL CAUSES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 138
PAGE 2

RATE PER 1,000
2000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 19 Aug 1944

The admission rate for all causes continued the increase which has been recorded for three consecutive weeks. The 1944 curve, however, stands below the 1943 curve for the corresponding period. The highest rate(876) was reported for the Potomac and Severn River Commands, the lowest(355) for the 12th District.

The respiratory disease curve rose slightly and for four consecutive weeks has stood above the 1943 curve for the corresponding periods. The highest rate(189) was reported for the 13th District, the lowest(58) for the 12th District. In only four Districts and the Potomac and Severn River Commands did the rate for these infections fail to rise.

The venereal disease rate was reported, as last week, at 34. The curve continues to stand above the 1943 curve. The highest rate(47) was reported for the 8th District, the lowest (22) for the 9th District.

Influenza and Catarrhal Fever. For the third consecutive week the rate for these infections increased and it would appear that the upward trend from the summer time low has already begun. The 1944 curve continues to stand well below the 1943 and 1942 curves for the corresponding period. The 9th District reported the highest rate(103) and the 12th District the lowest(38).

Pneumonia--Broncho and Lobar. The rate for these infections continues at 1. This compares very favorably with a rate of 1.9 for the corresponding week of 1943, and a rate of 3.4 for the corresponding week of 1942. The 13th District reported the highest rate(5). The 1st, 4th, and 6th Districts and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. After standing at 2 for the past thirteen weeks the curve for this infection rose this week to 3. Since the week ending June 24, the atypical pneumonia rate has exceeded the broncho and lobar pneumonia rate. The highest rate(9) was reported for the 8th District, the lowest rate(0.53) for the 12th District.

CURRENT TRENDS --CONTD.

Tonsillitis and Pharyngitis, Acute. The curve for these infections rose slightly this week after standing at 33 for the two preceding weeks. The 13th District reported the highest rate(89), the 6th District the lowest rate(19).

Rheumatic Fever, Acute. For the fifth consecutive week the rheumatic fever rate has been 1. The rate for the corresponding week of 1943 was also 1. The highest rate(9) was reported for the 13th District. The 4th, 7th, and 8th Districts and the Potomac and Severn River Commands reported no cases.

Scarlet Fever. The scarlet fever curve after standing for four consecutive weeks at 2, turned upward to 3. Largely responsible for this was the rate of 51 reported for the 13th District. No other District reported a rate over 2 and the 1st, 4th, 6th, and 8th Districts and the Potomac and Severn River Commands reported no cases. Though the curve stands below the 1943 curve it is well above the 1942 curve for the corresponding period.

Cerebrospinal Fever, Meningococcic. The rate for this infection rose slightly this week but the trend which started the fourth week in February still appears to be downward. Only three Districts reported cases. The highest rate reported was that of 2 for the 4th District.

Malaria. After standing at 2 for four consecutive weeks the malaria curve turned upward this week to 3. The rate for the corresponding week of 1943 was 7 and for the corresponding week of 1942 it was 0.2. The highest rate(9) was reported for the 1st District. The 7th District reported no cases.

Measles. The measles curve continued its downward trend this week and stands at the lowest point recorded for any week in 1944. The curve stands below both the 1943 and the 1942 curves for the corresponding period. No District reported a rate over 2. The 1st, 4th, 6th, and 8th Districts and the Potomac and Severn River Commands reported no cases.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 138

PAGE 5

CURRENT TRENDS--CONTD.

Poliomyelitis, Anterior, Acute. Eleven new cases of poliomyelitis were reported for the week by Continental Shore Stations -- 8 from the 11th District, 1 from the 12th District, and 2 from the 9th District. The cumulative total of poliomyelitis cases reported from all Continental Stations, Jan 1 through Aug 19, is 34. *

U. S. Public Health Service reports for the week show the civilian cases in the six States with the highest incidence distributed as follows:

New York	469	Virginia	66
Pennsylvania	108	Michigan	55
Ohio	92	North Carolina	48

* .7 of these cases were not reported on Weekly Morbidity Report NavMed-172.
